For more than ten years ecological experts could accompany the integrated ecological development of the biggest private university in Ghana: Valley View University (VVU), Accra.

This was made possible in the frame of two projects, financed by the German Federal Government. The first research and development program was about ecological cycles at VVU, financed by the German Federal Ministry of Education and Research (BMBF), the second dealt with promoting VVU as climate friendly university and was financed in the Frame of the Climate Change Initiative of the Federal Government of Germany by the German Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (BMU).

The experiences in research and implementation of such kind of ecosystems, harvested both by this specific projects and by the projects before, of IÖV and its members, are summarized in this book.

The ecological development of VVU would not have been possible without the continuous support of VVU, namely by its President, Dr. Seth Laryea and the head of the Physical Plant Department, Emmanuel Kwandahor.
